

windream Mobile

**The enterprise content management
solution for mobile use**

The enterprise content management solution for mobile use

Modern computers become smaller and smaller. Nowadays, an up to date notebook computer can completely replace a local workstation and even exceed the performance of a desktop system. For users being frequently „on the road“ and having to transport data, the increasing „shrinking“ of complex hardware technologies is a real technological advantage and benefit. But not only the hardware components have substantially become smaller during the last years.

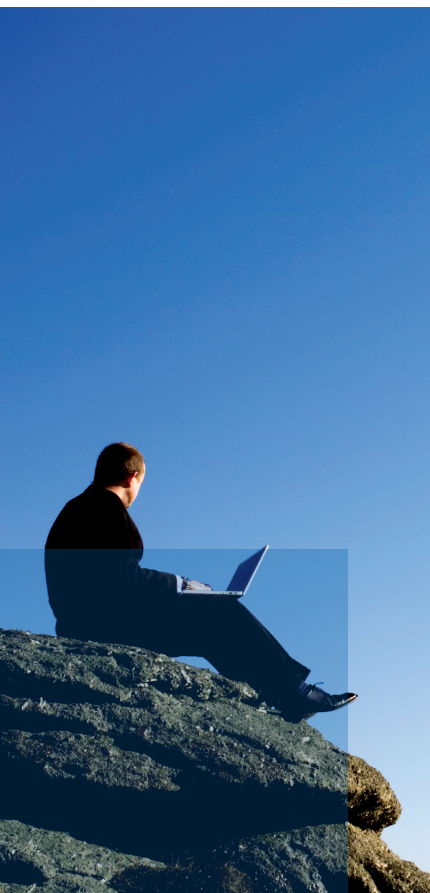

Also modern software solutions – especially in the ECM- sector – are able to fulfill a mobile user's individual needs. According to this requirement, windream GmbH has developed a solution for the windream enterprise content management system which allows users a completely mobile use of the ECM-system with convenient data synchronisation.

Documents always up to date. This procedure is not new for Palm and Windows CE-users: Attach handheld to the docking station, press the button and all data is synchronised between handheld and desktop computer. A quite similar and convenient procedure is now available for windream users, too, who can administer their documents on a notebook computer as conveniently as on a windream desktop client.

With the windream synchronisation software, we offer an innovative solution which allows a data synchronisation between two windream systems. The synchronisation process is based on detailed rules. In mobile use, the synchronisation process is preferably executed between a notebook with an installed windream single user version and a locally bound windream server operating in a network.

For example, the synchronisation process offers users an opportunity to always keep data of both windream systems up to date.

Individual configuration. During a synchronisation process, selected folders and documents and the associated properties, e.g. the indices, are adjusted on both systems. The windream Mobile solution allows users to configure the synchronisation processes individually and according to defined rules as so called actions. You can save the actions in separate configuration files. Depending on the type of action configured, documents can either be created or deleted on both windream systems. Further, new document versions can be created or existing previous versions can be overwritten by current versions on one of the connected computers.

Generally, the synchronisation module differentiates between two synchronisation modes, which are

- master – slave and
- left – right.

A „master – slave“ synchronisation regards the master computer as the preferred system. It determines the objects to be added, changed or removed to/from the slave. In a „left – right“ synchronisation process, you can determine the way the system shall handle the objects for each side separately.

Due to the fact that the rules determined by the users can be saved in configuration files, a configured process can be repeated any time without further manual adjustments. Actions which have been saved can also be viewed, changed, extended or removed any time.

Mobility – free and easy. The mobile windream solution substantially enhances the range of functions of the windream ECM-system system. It offers completely new application sectors in mobile use. As – technologically – the windream standalone software is based on the current version of the network client application, the system provides all functions of the network client on mobile devices. Especially the convenient retrieval applications grant users a quick access to documents, even in complex data volumes.

Independent of their specific and professional requirements: windream users who must always be able to access complex document collections quickly will get a complete mobile ECM-solution consisting of an integrated synchronisation module and the windream Mobile solution.

Performance features:

- ECM for mobile use – independent of locations and without any functional restriction
- Convenient data synchronisation between two windream systems, also on portable computers
- Synchronisation of documents and properties
- Complex but easy to handle configuration options with storable rules

Rely on the Technological Market Leader

If you plan to invest in an innovative, efficient and easy to handle ECM-system, or if you need further information on how to optimise your business processes concretely, we should get to know each other.

In the market sector of ECM-software suppliers, windream GmbH is the technologically leading manufacturer. With the windream ECM-system based on the patented Virtual File System technology (VFS), we have created an unrivaled tool for administering your complete company knowledge. Our software is easy to handle, effective, and future-proof. We have 20 years experience in successful software solutions development for enterprises of any size. Medium-sized companies and multinational corporations as well rely on our top quality products and on our technological know-how.

Look and see!
